Highlights

Evidence Routing and Supported Residuals for Cooperative LiDAR–Radar Perception

Anonymous Authors

- Detached missing/spurious scores guide routing while retaining available modalities.
- SBR bounds local residuals using measured radar support and current feature amplitude.
- AB gains 3.52 points in Snow AP3D at IoU 0.7 and 1.67 in the Fog/Snow mean.
- AB loses 0.26/0.19 points in Normal/Fog; N2 leads the weather mean, at 50.62%.
- Snow is held out from training and model selection across seven matched configurations.

All score differences are percentage points. Model selection uses Normal/Fog validation data; Snow is reserved for final testing.
