Evidence Routing and Supported Residuals for Cooperative LiDAR–Radar Perception

Anonymous Authors

Author names, affiliations, and contact details are withheld pending confirmation of authorship.

Target conference

2027 30th International Conference on Computer Supported Cooperative Work in Design (CSCWD 2027)

Funding

To be confirmed with the authors.

Keywords

cooperative perception, LiDAR–radar fusion, adverse weather, evidence routing, bounded residual

Editorial assistance

During the final editorial pass, OpenAI Codex assisted with English-language editing throughout the manuscript, preparation of the editable architecture figure, and the accompanying submission materials. The recorded experimental results and method equations were retained.
